EDUCATION

University of Waterloo

Waterloo, ON

Bachelor of Applied Science in Computer Engineering (Co-op)

EXPERIENCE

AI/ML Powered Software Engineering Intern

Jan. 2026 - Present

RamSoft

Toronto, ON

- Deployed a **real-time MedASR web app** with chunked audio streaming and **Kubernetes** orchestration, reducing transcription costs and eliminating third-party patient data exposure.
- Built **AI-powered automation workflows** using **Azure** AI tooling, integrating ML models into a production clinical platform with **CI/CD** pipelines, auth flows, and Agile sprint delivery
- Designed a three-pass **LLM judge evaluation pipeline** to assess models across hallucination and omission criteria, driving model selection for a production clinical transcription feature

Cloud Software Engineering Intern

Jun. 2025 - Sep. 2025

Tripleview Technologies

Mississauga, ON

- Automated Teams call recording retrieval using **Azure**, **Microsoft Graph**, and **C#**, eliminating **10+ hours/week** of manual work for customer support teams.
- Built an **AI summarization pipeline** with webhook triggers and polling logic, transforming raw transcripts into structured **Zendesk** tickets and reducing team miscommunication.
- Owned the full dev lifecycle delivering **production Azure tooling** now expanded across internal teams.

PROJECTS

FocusOS - Personal Productivity OS | *FastAPI, PostgreSQL, React, Azure OpenAI, Docker*

- Built a full-stack productivity OS with an **AI job analysis pipeline** using **Azure OpenAI** — scores resume-job match, extracts ATS keywords, and generates tailored LaTeX resumes.
- Designed a **multi-step background task pipeline** with non-blocking AI calls, retry logic, and real-time status polling, deployed with **Docker** and a **PostgreSQL** backend.
- Implemented session tracking, habit metrics, and a normalized **multi-table schema** with a **React** dashboard surfacing real-time productivity insights.

Mathora - Learn Math Visually | *React Three Fiber, Three.js, LLMs, Express*

- Built an LLM-controlled math engine that dynamically drives **3D graphing, whiteboard, camera, and voiceover animations** via structured prompt schemas for step-by-step learning.
- Designed a **custom animation library** with a parameter schema exposed to the LLM, enabling deterministic visual execution with safe fallbacks.
- Implemented a **timeline-based rendering system** synchronizing explanations, animations, and narration

Yuno Ball - NBA Odds and Prediction Engine | *Python, Flask, React, XGBoost, Data Engineering*

- Scraped and processed **9,000+ NBA games**, engineered 27 statistical features, and cut noise via feature ablation
- Trained **XGBoost and Random Forest models** achieving **64.8% accuracy**, benchmarked against **Polymarket odds** to evaluate real-world edge.
- Built a full-stack system with **Flask API** and **React** frontend featuring graded bets, parlay builder, and a Gemini chatbot explaining decisions via feature importance.

LockIn AI - Distraction/Habit Detection App | *Python, YOLO, OpenCV, Next.js*

- Built a real-time desktop productivity tool using **YOLO + OpenCV** for webcam-based distraction detection
- Implemented a **Flask + SocketIO** backend with threaded workers for event-driven detection.
- Designed an **Electron + Next.js** UI with habit toggles, site blocking, and live monitoring feedback.

TECHNICAL SKILLS

Languages: Python, C/C++, C#, Java, JavaScript, TypeScript, SQL

Frameworks & Libraries: React, Next.js, FastAPI, Flask, Node.js/Express, Three.js, React Three Fiber

Cloud & DevOps: Azure, Kubernetes, Docker, Microsoft Graph API, REST APIs, Git, Jira, Confluence

ML/Data: Scikit-learn, PyTorch, XGBoost, Pandas, Feature Engineering, Computer Vision

Game/3D: Unity, WebGL
